Custom panels

Because your building is unique, at Golmar we offer you the possibility of making customized panels. Based on the information you provide us, our design department will make you a personalized panel proposal.

Tailor-made

We adapt the design to the available space, using the existing embedding box or creating a new one. If the facade of your building does not have space, we can supply the panel mounted on a column.

High quality materials

We manufacture our panels in AISI 316 stainless steel, anodised aluminium, brass,... which guarantee their durability.

The push-buttons, always made of stainless steel, have an IP67 protection rating.

◀ Labeling

The label holders are illuminated and the name can be changed without opening the panel. If you prefer, we can engrave laser engraving on the panel, with paint filling, or on metal or acrylic panels.

Full colour ▶

Stainless steel or aluminium panels can be painted in any RAL colour.
